
AMMONIA/UREA

Burrup Peninsula - Ammonia Urea Plant

DAMPIER NITROGEN

Dyno Nobel has purchased the interests of Plenty River (Plentex) and Thiess in a large scale ammonia/urea project to be located on the Burrup Peninsula. Dyno Nobel has put plans for this project on hold due to current economic conditions. The company is also conducting a feasibility study into developing a 230,000 t/a ammonium nitrate production facility, which could be located adjacent to the ammonia/urea plant. The alternative (to a large scale ammonia plant) of building a small scale ammonia plant to supply the ammonium nitrate plant is being investigated as part of the feasibility study.

Expenditure: \$900m.

Employment: Construction: 1000; Operation: 130
