

TCF Awarded LNG Development Contracts By Woodside Energy

Posted on: Wednesday, 21 May 2008, 09:01 CDT

TCF, the Australian joint venture between French engineering group Technip, Chiyoda and Fluor, has been awarded service contracts for two proposed liquefied natural gas developments in Australia, by Woodside Energy.

The first contract covers an onshore plant development study, as part of the selection process of a design concept for the Browse liquefied natural gas (LNG) development, located 425km from Broome, Western Australia.

The second contract covers the preparation of a basis-of-design for a proposed second processing train for the Pluto LNG Project, located in Australia's Burrup Peninsula. These studies are scheduled for completion in the second half of 2008.
